THE CHICKEN WHISPERER

HOW DO I CHECK FOR RED MITES?
The red mite Mitefa can be as short as seven days, they can reproduce in poultry housing and can survive for up to 10 months without feeding, so it is important to regularly check for signs of red mites. They only attach to feed or one to two hours at a time. A weekly check should include running your hand under the perches for signs of blood spots, while tapping the wood around corners, or any nooks and crannies, this will bring out any hidden mites for a visual check.

HOW DO I MAINTAIN A MITE FREE ENVIRONMENT?
To remove the constant threat of red mites, a weekly three-step programme is advisable. First thoroughly clean out your coop and remove all bedding, dry matter and mite dust. Secondly, spray Nettex Total Mite Ready to Use Solution onto all surfaces, including the underside of the roof. Hard to reach areas can be treated with a wash gun.

THE TOTAL MITE READY TO USE
Total Mite Ready to Use. Clean your chicken house and kill mites in the same spray.

- Read to use solution is a multi-action cleaner with added insecticides to kill lice, fleas, mites and mite powder to create a mite free and healthy home for your flocks.
- Formulated with an oily base, when sprayed onto the surface it will help penetrate deep into any cracks and crevices where parasites tend to burrow and hide.

How to use:
It is very important to prevent a build-up of bacteria in the coop, which promotes the spread of disease. Use Total Mite Ready to use as part of your hygiene regimen for your coop and housing. Remove all bedding and spray directly on all surfaces, including the underside of the roof. After it has been cleaned and scrubbed, mite powder should be applied over the surface of bedding, crevices where mites burrow and hides and corners, the ends of roosting bars and their brackets.

Size | 500ml | 20L

THE TOTAL MITE LIQUID CONCENTRATE
Highly effective insecticide and multipurpose disinfectant cleaner for professional use. Kills lice, fleas, lice and other flying and crawling insects.

- Dilute 1 litre of concentrate with 10 litres of water. One litre will solve 100sqm
- Penetrates deep into cracks, crevices and corners which parasites commonly use to hide in
- Continues to work even after drying
- Hot to direct use on birds

How to use:
Remove all bedding and dry matter from your house, mix as per directions and spray onto all surfaces of the coop, paying special attention to all cracks and crevices. Allow to dry before re-introducing your birds.

Size | 500ml | 2L

THE TOTAL HYGIENE POWDER WITH DIORMICROBICUS EARTH
A naturally occurring powder that can be applied directly onto all types of debris and surfaces.

- The powder has a high affinity for moisture and will absorbed promiscuous and hygiene
- The powder emerger presents the build-up of moulds, fungi and discourages infestation of types of mites and other crawling insects
- How to use:
Apply in the new box on and on of bedding as it is an effective way of applying powder to the hens underlay when they set down to lay. Repeat weekly when cleaning out the house.

Size | 200g | 300g | 1kg | 5kg

THE TOTAL MITE SPRAY
A rapid knockdown insecticide in an aerosol format. It is formulated to kill common mites (mite and dermatophil sand mites) and other mites in poultry housing, arks, coupe and other buildings.

- Total Mite Spray is used on all poultry houses, lice house flies, lice house flies, lice, flies, bees, small slugs, flies, lice, lice, reptiles, monkeys and mites
- Spraying a week will be controlled as it long-lasting residual action that gets deep into cracks where mites burrow

How to use:
Use once a month throughout the year, especially during winter to destroy dormant mites. Continue use to prevent and control mite infestation during the warmer months when mites are prevalent.

Size | 250ml | 500ml

THE LOUSE POWDER
An effective powder against lice, mites and fleas, but will also kill most crawling and flying insects such as silverfish, beetles, ants and wasps.

- Contains an approved insecticide for use in chicken coops, on hard porous and non-porous surfaces, soft surfaces in and out and in animal houses, animal houses and sheds
- May be used in conjunction with Total Mite Liquid as part of a weekly hygiene regimen

How to use:
Use the shaker pack to sprinkle around the coop after sprinkling with Total Mite Liquid Concentrate paying special attention to lice and eggs, the end of running bars and their brackets.

Size | 350g shaker pack | 1kg

THE GROUND SANITISING POWDER
For use in runs and rooms to help maintain a healthier environment for your poultry.

- Helps maintain a low risk environment for poultry. The powder reduces exposure to sewage and performance compromising environmental factors
- Helps absorbs moisture and the colour of faeces and organic matter, reducing the risk they pose to bird health
- Extends the bedding life
- Prevents disinfection - Contain Viratec-P

How to use:
Apply liberally where faeces and organic matter are prevalent. Once every 3 weeks powder should be spread over the entire house and5 hours before use, any hatching eggs should be dusted with the powder, to prevent any eggs already infested from hatching and adding to the problem.

Size | 500g | 2kg | 5kg

THE CHICKEN WHISPERER
KEEP YOUR FLOCK HEALTHY AND HAPPY
As a chicken keeper you will always welcome new birds to your flock periodically. But it’s important to introduce them carefully to avoid upsetting the flock order. Use alternative housing to quarantine the new birds whilst you treat them for worms and any other parasites. Use alternative housing to quarantine the new birds whilst you treat them for worms and any other parasites. Use alternative housing to quarantine the new birds whilst you treat them for worms and any other parasites.

How to use:
Spray a solution into a large bucket for soaking poultry utensils or fill a spray bottle for application to all poultry equipment.

Size | 500g

POULTRY 4 IN 1 DISINFECTANT
Poultry 4 in 1 disinfectant kills bacteria and viruses associated with poultry disease.

- Suitable for feeders and drinkers
- Sterilises hatching eggs and eating eggs
- Sterilises wild bird feeders and drinkers
- Use on all incubating equipment

How to use:
Spray directly onto all equipment and utensils once a week, and leave to dry. When using an incubator to hatch, ensure all incubator parts are disinfected thoroughly before use, otherwise hatching eggs should be killed with cold disinfectant solution before being used in the incubator. For use on an egg wash, spray directly on to the eggs and leave to dry. Dry matter may be wiped off the egg completely. Egg wash will not affect the egg integrity, but will remove any bacteria that have come into contact with the egg.

Size | 500ml

POULTRY ESSENTIALS KIT
A broad spectrum poultry disinfectant powder concentrate. It can be used on poultry housing, arks, equipment and on porous surfaces, effective in the presence of organic matter.

- Will go up to 50 litres of solution

How to use:
Mix up a solution into a large bucket for soaking poultry utensils or fill a spray bottle for application to all poultry equipment.

Size | 200g | 300g | 2kg | 5kg

VIRATEC-P Poultry Disinfectant
A broad spectrum poultry disinfectant powder concentrate. It can be used on poultry housing, arks, equipment and surfaces effective in the presence of organic matter.

- 50g will make up to 50 litres of solution

How to use:
Mix up a solution into a large bucket for soaking poultry utensils or fill a spray bottle for application to all poultry equipment.

Size | 250ml | 500ml

THE CHICKEN WHISPERER
POULTRY ESSENTIALS KIT

HERBAL GUT CONDITIONER

When you start keeping chickens, the excitement of retrieving that first egg never leaves you. The difference in quality between eggs from your birds and those from the store can be seen in the extra attention you give to their feeding.

The Nettex poultry range is comprehensive, ranging from nutrition to the flock's health and productivity. The Nettex poultry product range is made for laying hens containing high levels of limestone and oyster grit to assist digestion.

Minerals boost for laying hens containing high levels of lime and oyster grit to assist digestion and support shell quality.

How to use: Add Mineral Boost to feed twice a week to support optimum health.

Size | 450g

POULTRY SEAWEED

At moulting adding seaweed to your hens’ diet will provide extra essential amino acids to assist the new feather growth of your birds.

How to use: Add 1 x 25ml scoop per 1kg of feed to the diet gradually.

Size | 400g

POULTRY CIDER VINEGAR

Poultry cider vinegar is natural, pure, unfiltered, non-pasteurised product that can be added to feed or water. A good source of vitamin A, vitamin C, calcium and phosphorous. Poultry cider vinegar can help to support the immune system, maintain vitality and good feather condition. When added to water at the rate of 20mls per litre it will help sanitise the water and the drinker. Natural properties of the product will also support birds through times of stress such as weather extremes, moving house, introduction of new birds or other fox attacks.

How to use: Administer 1tsp per 1litre of water. One litre per 100mls of feed (pellets or mash) until the pullets start laying at around 20 weeks. Once the birds begin producing eggs they can move onto a layers ration.

Size | 1 litre

ANTI-FEATHER PECKING SPRAY

Use a licensed wormer

Top management tip: Don’t be tempted to feed your birds too many treats and never offer human food - their digestive systems can’t cope with salt or sugar in processed foods. A farrier will soon stop lameness but her health will suffer. Some fresh greenery is fine, but limit portions and offer only at the end of the day.

VITAMIN BOOST W ADDeted SEAWEED

Supplies essential vitamins and minerals through drinking water to help support bird health and vitality all year round.

How to use: Add Vit Boost+ to your birds’ water at 5ml per 4.5 litres of water.

Size | 100ml | 250ml | 500ml

SCALY LEG

A specifically blended formulation designed to deter the scaly leg parasite in one simple spray application.

Scaly leg works in three ways:

• Preventing a repeat cycle to deter mites
• Creating an inhospitable environment for the mites
• Providing relief by anesthetizing the source of discomfort

How to use: Spray on to a soft brush and apply to legs and feet. Repeat every 5-6 days to break the egg cycle until the infestation has gone and the scabs have grown from under the scales.

Size | 250ml | 500ml

PROBIOTICS AND SEAWEED

Probiotics help support healthy bowel and bird health.

How to use: Add Probiotics and seaweed to drinking water.
